

BLAST MITIGATION FILM GETS TOP RESULTS AT LONDON UNIVERSITY

SITE KINGS COLLEGE LONDON **SITE LOCATION** STRAND, LONDON **CUSTOMER** WHYBROW CONSULTANTS

King's College London is one of England's oldest and most prestigious university institutions. Situated in the heart of London the faculty boasts leading edge research technology and nearly 20,000 students.

Risk assessments carried out by main contractors, Whybrow Consultants, identified how vulnerable the college would be in the event of an explosion. The effects on the faculty would be catastrophic.

The flying shards of glass would not only cause extensive damage to their laboratories and equipment but inflict serious injury and fatalities to the occupants.

“More than 90% of injuries following an explosion are caused by flying shards of glass”

The aftermath of London bombings in July 2005

“Doing business with GP Systems has been a true pleasure for us. The quick response and professional approach has been really impressive.

They quickly identified our clients needs and provided us with the best solution”

Tush Enver (Contracts Manager) Whybrow Consultants

“Given the complex nature of this building combined with the limited time frame to implement this project, I would like to thank GP Systems for organising the installation so efficiently.”

Duncan Ede (Estates Manager) Kings College London

The Solution: Bomb Blast Mitigation Film

- Provides protection for people and property in the event of a bomb blast or chemical explosion
- Minimises the risk of personal injury from broken glass
- Ensures rapid recovery of business following window breakage, explosion or bomb blast.
- Combined with edge retention systems for increased protection

GP Systems provided a retrofit solution to help safeguard the college from risk. The challenge was to carry out the installation with minimal disruption to the faculty.

GP Systems' philosophy of managing its projects from day one ensured that the installation was carried out efficiently, safely and to the highest of standards.
